Logistics is generally the detailed organization and implementation of a complex operation. In a general business sense, logistics is the management of the flow of things between the point of origin and the point of consumption in order to meet requirements of customers or corporations. The resources managed in logistics can include physical items such as food, materials, animals, equipment ...

Jun 22, 2009  " I could be wrong, but I'm fairly sure the phrase "Internet of Things" started life as the title of a presentation I made at Procter & Gamble (P&G) in 1999. Linking the new idea of RFID in P&G's supply chain to the then-red-hot topic of the Internet was more than just a good way to get executive attention.

### **Application of Radio Frequency Identification Technology**

RFID (Radio Frequency Identification, RFID) is a technology that uses radio waves to identify and track objects. It is used in a variety of applications, including supply chain management, inventory control, and asset tracking. RFID tags are small, inexpensive devices that can be attached to objects and read by a scanner. The scanner sends a radio signal to the tag, which responds with a unique ID number. This information can be used to track the object's location and history.
