OpenFlow is a communications protocol that gives access to the forwarding plane of a network switch or router over the network.

### **OpenFlow - Wikipedia**

Software-defined networking (SDN) technology is an approach to cloud computing that facilitates network management and enables programmatically efficient network configuration in order to improve network performance and monitoring. SDN is meant to address the fact that the static architecture of traditional networks is decentralized and complex while current networks require more flexibility ...

### **Software-defined networking - Wikipedia**

As shown in Fig. 2, Open Networking Foundation (ONF) vertically splits SDN architecture into three main planes (SDN architecture, 2014):. Data Plane: Data plane is the bottom plane and consists of network devices such as routers, physical/virtual switches, access point etc. These devices are accessible and managed through C-DPIs (Controller-Data Plane Interfaces) by SDN controller(s).

### **Quality of Service (QoS) in Software Defined Networking**

Software-defined networking (SDN) is a way to manage networks that separates the control plane from the forwarding plane. SDN is a complementary approach to network functions virtualization (NFV ...
